THE SYSTEM

Steel has changed the building design world, allowing light to take pride of place.

SistemAcciaio by Secco Sistemi is the perfect tool for the designer to create new rules and values.

SistemAcciaio is the integrated system of sections, fittings and gaskets for making window and door frames in four superior metals: galvanised steel, stainless steel, Cor-Ten steel and Bronzofinestra.

Through the properties of their respective materials, structural strength and variety of finishes, these four systems can be used by designers to resolve any type of problem.

SistemAcciaio: it is now possible to change the world

ADVANTAGES OF SISTEMACCIAIO

- Integrated system of sections, fittings and glazing gaskets/seals for every type of envisaged window or door
- Slender sections yet able to guarantee maximum structural performance to make increasingly more elegant and bright window/door frames and curtain walls
- Performance guaranteed by tests that meet every design requirement and are in conformity with the CE marking
- High levels of strength and corrosion resistance, long life, simple and low-cost maintenance
- Reduced surface area of section compared to overall surface area of the window/door, ensuring a low u-value of the finished product
- Natural and essentially ecological material, 100% recyclable without limit
- Possibility of making regular arched shapes or to customer template
- Possibility of reinforcing the window/door frames according to end customer requirements
- Reduced assembly times and simple application of fittings
